DroidPad Crack + With Serial Key [Mac/Win]

===== DroidPad is a simple tool that enables you to use your Android powered mobile phone as a Joystick for gaming and other activities. Using this tool you are able to play games on your computer using your mobile phone that is connected via USB cable or Wi-Fi. To get started, you must have the application installed both on your PC and on the mobile device. The two also need to be connected either a USB cable or over a Wi-Fi network. Once the connection signal is sent from the mobile to the PC, DroidPad is able to recognize the device. In case that doesn't produce any results, you can add a custom device, meaning that you have to enter the IP/ hostname address as well as the port that is used. When the connection is established, you are able to control your mouse cursor using the mobile phone. DroidPad is able to work in modes such as 'Joystick', 'Mouse' and 'Slideshow', each of them using features of the phone to provide different functions. Configuring DroidPad as a joystick you get to use the on screen buttons to control your game. Mouse mode enables you to manipulate the mouse cursor using your phone. This can be done by tilting, where the cursor moves according to how you rotate the phone around its axis. DroidPad also allows you to use your phone screen in the same way you use a notebook trackpad, complete with buttons. A more complex method of controlling the mouse pointer is by using the phone's gyroscope. DroidPad also enables you to adjust the sensitivity for the axes that are responsible for tilting and panning. Moreover, you can reorganize the axes and buttons according to those needed in the game. In closing, DroidPad is indeed a handy tool to have around when you're tired of playing games in the traditional way, or your joystick is unavailable. DroidPad details: ===== DroidPad is a tool that allows you to use your Android powered mobile phone as a Joystick. You don't need to have a special Bluetooth dongle to be able to connect the mobile with your PC. You can simply use the Android connection USB cable. Once the connection is made, DroidPad is able to recognize the phone. You will then be able to use the phone's screen as if it were a game pad. This is usually achieved

DroidPad Crack Free License Key Download

• If you have a keyboard macro, you can now use your mobile phone to control your mouse! • Map the keys you want to control the mouse pointer with your mobile phone. • Use macros to enable the phone to act as a mouse. • You can edit your button macros using the virtual keyboard. • You can configure the sensitivity of the movement of the mouse. MUTE MIC Description: • In the app you can mute your mic using your mobile phone. • In the phone press the 3 keys (Menu, Home and Back) and the softkey volume button (ON/OFF) at the same time, then the mic mute icon will appear on the screen. • You can un-mute your mic with the same method used to mute it. EXTRA DISCLAIMER: • The APK file for this application may not be hosted on Google Play. Please download and install it manually from here if the direct download is not working. A FREE drone app for flying, racing and uploading aerial videos.
