Keymacro is a cross-platform terminal that allows you to quickly create and manage keyboard macros in a simple way. This is a very useful application if you need to create your own keyboard shortcuts. Main features Keymacro is a cross-platform application that runs on Windows, Mac OS and Linux operating systems. It is designed to allow you to create keyboard shortcuts for specific situations (such as launching web browsers or your email client), without the need for a mouse or any other input device. You can enter keyboard shortcuts by simply typing text, and Keymacro will make sure it corresponds to a default shortcut. It will also suggest different ways of entering each key combination you need, so you can create a shortcut to launch your email client by pressing the "i" key or your web browser by pressing the "g" key. Keymacro has various useful features that should make it easier for you to create your own custom keyboard shortcuts. For example, you can map a key combination to a particular document or to a particular folder and keep the shortcuts active even if you close the application. You can also use different keyboard layouts and languages, while the program will take care of selecting the appropriate language for the shortcuts you create. It also has the ability to hide keyboard shortcuts you use often, and it can add keyboard shortcuts from other applications you install. Lastly, the program lets you customize keyboard shortcuts for other users, which can be very useful if you share your computer with people who might need to use your shortcuts, for example your mom or your boss. How it works Keymacro is a cross-platform application, so it can run on all the common operating systems, including Windows, Mac OS, Linux and Android. It is designed to allow you to create shortcuts that will perform predefined actions, such as launching your email client or the browser. The application will ask you to enter the shortcut text, and it will make sure it matches a predefined keyboard shortcut. Once you have entered the text, the program will attempt to identify a shortcut that will perform the task you need. The program will ask you to select the shortcut and it will also allow you to edit the shortcut if you want to change its configuration. Keymacro can run from its home screen, from the desktop or from the Windows Explorer window. Where to find it You can download Keymacro from the official website. Keymacro is a free application with no in-app purchases 2edc1e01e8
